Boston, MA 02081

## What is Seam Group Maintenance Solutions?

- We are a total solutions provider of turnkey electrical repair, lighting repair, and project roll-out services.
- We oversee a network of more than 5,000 pre-qualified electricians operating under oversight by licensed professionals to deliver high-quality service at a very competitive price point.
- We both self-perform for clients as well as provide management of our local technician network to ensure jobs are done correctly and efficiently.
- We provide services to clients 365 days a year and 24 hours per day, regardless of weather or emergency conditions, to the U.S., Canada, Puerto Rico and the U.S. Virgin Islands.

## Services Include:

- Electrical and lighting repairs
- Nationwide rollouts
- Service upgrades and panel replacements
- New circuit installations
- Energy management systems installations
- Generator, switchgear and transformer installations and repairs
- Breaker maintenance and replacement
- Energy-efficient lighting upgrades and retrofits
- Group relamps and scheduled maintenance
- Occupancy sensors, timers and controls installations and repairs
- Electronic article surveillance (EAS) installation, removal and repair
- 24-hour emergency and on-demand service with prompt response

## MAINTENANCE SOLUTIONS: WHERE RELIABILITY MEETS CONVENIENCE

**For electrical repairs and installations, turn to experts you can trust to get the job done right for the right price. Rely on a company with the depth of knowledge to understand your business, the scale to meet your needs wherever you are and the relationships to keep your operations running smoothly.**

## WHAT MAKES MAINTENANCE SOLUTIONS DIFFERENT? ED BURKHART EXPLAINS:

### OUR HYBRID BUSINESS MODEL:

"When clients work with us, they receive the best of both worlds—the convenience of working with a local contractor and the reliability of working with a global company. We both self-perform for clients as well as provide management of our local technician network to ensure that projects are done efficiently and professionally, but with more accountability and careful management than you would receive with other partners."

### OUR COMPETITIVE PRICING:

"By having certified engineers and licensed professionals review quotes and challenge service technicians, we offer prices that are better than competitors. Through volume aggregation, we provide project management services that would otherwise fall on the customer and by acting as a single-source, total-solutions provider, we help clients minimize costs associated with working with multiple vendors."

### OUR SUPPLIER RELATIONSHIPS:

"Our value-added relationships with suppliers are a key reason to work with Seam Group. By maintaining good relationships with both clients and suppliers, our personnel are well-equipped to act as an intermediary in any warranty-related dispute, and to mitigate losses for our clients."

### OUR VENDOR ACCOUNTABILITY:

"Seam Group is committed to the satisfaction of our clients and committed to working with only the best sub-contractor partners as a result. We rigorously evaluate every one of our partners, factoring in metrics from every job completed."

### OUR ONGOING COMPLIANCE APPROACH:

"Predictive Service employs field engineers, licensed supervisors and certified technicians to mitigate risk to your brand. We maintain ongoing vendor credentialing to ensure compliance with national and local regulations, and manage all of the proper licensures, liability insurance, references, and more."

### OUR PREDICTIVE SERVICE ADVANTAGE:

"We offer what other electrical installation and repair companies can't, thanks to the multi-industry focus of Seam Group. We have patented technology and expertise to not only fix the problems you know about, but to locate and address potential issues cost effectively as well. Within the same company, we can offer predictive maintenance (PdM) services such as infrared inspections as well as our vast engineering solutions, including energy audits, lighting and facility assessments, building envelope and energy modeling."
